

BlockSAFU

ADVANCE MANUAL SMART CONTRACT AUDIT

Project: Staccana Staking

Website: <https://www.staccana.com>

BlockSAFU Score:

97

Contract Address:

JBq7HS6z2Rz3aiiyZCAJvh2B9FktFxQ48XJpY9nSd9NX

Disclaimer: BlockSAFU is not responsible for any financial losses.
Nothing in this contract audit is financial advice, please do your own reasearch.

DISCLAIMER

BlockSAFU has completed this report to provide a summary of the Smart Contract functions, and any security, dependency, or cybersecurity vulnerabilities. This is often a constrained report on our discoveries based on our investigation and understanding of the current programming versions as of this report's date. To understand the full scope of our analysis, it is vital for you to at the date of this report. To understand the full scope of our analysis, you need to review the complete report. Although we have done our best in conducting our investigation and creating this report, it is vital to note that you should not depend on this report and cannot make any claim against BlockSAFU or its Subsidiaries and Team members on the premise of what has or has not been included in the report. Please remember to conduct your independent examinations before making any investment choices. We do not provide investment advice or in any way claim to determine if the project will be successful or not.

By perusing this report or any portion of it, you concur to the terms of this disclaimer. In the unlikely situation where you do not concur with the terms, you should immediately terminate reading this report, and erase and discard any duplicates of this report downloaded and/or printed by you. This report is given for data purposes as it were and on a non-reliance premise and does not constitute speculation counsel. No one should have any right to depend on the report or its substance, and BlockSAFU and its members (including holding companies, shareholders, backups, representatives, chiefs, officers, and other agents) BlockSAFU and its subsidiaries owe no obligation of care towards you or any other person, nor does BlockSAFU make any guarantee or representation to any individual on the precision or completeness of the report.

ABOUT THE AUDITOR:

BlockSAFU (BSAFU) is an Anti-Scam Token Utility that reviews Smart Contracts and Token information to Identify Rug Pull and Honey Pot scamming activity. BlockSAFU's Development Team consists of several Smart Contract creators, Auditors Developers, and Blockchain experts. BlockSAFU provides solutions, prevents, and hunts down scammers. BSAFU is a utility token with features Audit, KYC, Token Generators, and Bounty Scammers. It will enrich the crypto ecosystem.

OVERVIEW

Emergency Withdraw

- Have emergency withdraw

Fees

- Penalty (Max 20% based from user stake balance)

Pause

- Authority can only pause new staking; withdrawals can still be processed.

Blacklist

- Owner can't set blacklist.
- 

SMART CONTRACT REVIEW

Contract Name	Staccana Staking
Token Symbol	Staccana
Solana Cli	3.1.10
Contract Address	JBq7HS6z2Rz3aiiyZCAJvh2B9FktFxQ48XJpY9nSd9NX
Upgrade Authority	6Dyiocu4tsJgQRvG9SzVTvynveEbfhEGQExUTsAccccK
Tax Penalty	0-20%
Contract Created	Jun-10-2026 07:08:04 AM UTC
Verified CA	Yes
Anchor Cli	1.0.2

MANUAL CODE REVIEW

● Minor-risk

0 minor-risk code issue found

Could be fixed, and will not bring problems.

● Medium-risk

1 medium-risk code issues found

Should be fixed, could bring problems.

1. Risk

initialize_pool is permissionless; an attacker can squat the pool authority

Risk Scenario

Pool PDA = ["pool", staked_mint] and authority is a free parameter. Whoever calls initialize_pool first for a given mint wins and can set themselves as authority, controlling set_rates / set_penalty / set_paused / set_min_stake / set_pool_cap for users who stake there. No principal theft (no withdraw-from-vault instruction), but full param grief/DoS.

```
admin.rs: Line 58-88
pub fn initialize_pool(
    ctx: Context<InitializePool>,
    authority: Pubkey,
    reward_rate_30: u16,
    reward_rate_90: u16,
    penalty_bps: u16,
    min_stake: u64,
    pool_cap: u64,
) -> Result<()> {
    require!(penalty_bps <= MAX_PENALTY_BPS,
StakingError::PenaltyTooHigh);
    // Sanity cap: a per-period reward above 100% (10_000 bps) is treated
as a
    // misconfiguration and rejected.
```

```

        require!(reward_rate_30 as u64 <= BPS_DENOMINATOR,
StakingError::RewardRateTooHigh);

        require!(reward_rate_90 as u64 <= BPS_DENOMINATOR,
StakingError::RewardRateTooHigh);

let pool = &mut ctx.accounts.pool;
pool.authority = authority;
pool.staked_mint = ctx.accounts.staked_mint.key();
pool.stake_vault = ctx.accounts.stake_vault.key();
pool.reward_vault = ctx.accounts.reward_vault.key();
pool.reward_rate_30 = reward_rate_30;
pool.reward_rate_90 = reward_rate_90;
pool.penalty_bps = penalty_bps;
pool.min_stake = min_stake;
pool.pool_cap = pool_cap;
pool.total_staked = 0;
pool.total_reserved_rewards = 0;
pool.paused = false;
pool.bump = ctx.bumps.pool;
Ok(())
}

```

[admin.rs](#): Line 19-26

```

#[account(
    init,
    payer = payer,
    space = Pool::SPACE,
    seeds = [b"pool", staked_mint.key().as_ref()],
    bump
)]
pub pool: Account<'info, Pool>,

```

Risk Recommendation:

Deploy + initialize_pool in one atomic transaction, or force authority = payer.key() (then transfer via set_authority to a multisig), or restrict the caller to a known signer.

● High-Risk

0 high-risk code issues found

Must be fixed, and will bring problems.

● Critical-Risk

0 critical-risk code issues found

Must be fixed, and will bring problems.

Informational

3 informational-risk code issues found

No need to fix

1. Checks-Effects-Interactions ordering

Line: DESIGN line 198 vs code [user.rs:317-320](#)

Explain: CPI transfers happen before accounting updates. Safe on Solana (no token-program reentrancy) but deviates from the CEI principle stated in DESIGN §7.

Recommendation: Fix the doc to avoid misleading reviewers.

2. top_up_rewards is permissionless

Line: [admin.rs:168](#)

By design and harmless (only adds funds to reward_vault).

Recommendation: None — record as a conscious decision.

3. penalty_bps = 0 removes the early-exit cost

Line: [admin.rs:168](#)

With penalty 0, a user can stake then emergency-withdraw anytime at no cost (only forfeiting not-yet-earned rewards). Pure economic parameter; no pool loss.

Recommendation: Set a sensible minimum penalty operationally.

4. No emergency pause for withdraw/claim

Line: user.rs:86, [user.rs:148](#)

paused only blocks stake/add_to_stake. Intentional anti-rug tradeoff; no kill-switch if a bug is found.

Recommendation: Record as an accepted risk decision.

WEBSITE REVIEW

- Mobile Friendly
- Contains no code error

HONEYPOT REVIEW

- Ability to sell.
- The owner is not able to pause the contract.

Disclaimer:

This audit provides a technical evaluation of the associated project's smart contract. It aims to enhance security and value perception but does not guarantee safety or profitability. The audit isn't an endorsement of the project and doesn't absolve investors from conducting their due diligence.

Liability for any losses related to the use or interpretation of this audit is expressly disclaimed. Investing in blockchain and cryptocurrency projects inherently involves risk, and investors should only commit funds they are prepared to lose.

Investors are strongly advised to "Do Your Research" (DYOR). Here's a simplified checklist to guide the DYOR process:

1. Research the project and team.
2. Review audits and code.
3. Analyze token metrics and unlock dates.
4. Verify self-contribution in the launchpad pool.
5. Understand the token's functions and features.
6. Investigate token explorer comments.
7. Assess community activity and reviews.
8. Verify partnerships and compare the roadmap with the team's capabilities.
9. Trust your intuition and evaluate risks.
